Family of Instruments

Auditiva

Do you find yourself exhausted after dining out with family or friends?

With today's restaurant designs including open kitchens and hard surfaces, background noise has increased - creating a challenging atmosphere for audible conversations, especially for those with a hearing loss. The competing background noise drains your energy as you attempt to focus on the discussion.

Hearing is less tiring and listening is more pleasant with the Intuir as it reduces the annoyance and fatigue of background noise. The Intuir provides sound clarity and clear understanding of speech so you may participate in all conversations in any environment.

Features:

- Multiple programs available for different listening situations such as dining in a restaurant, participating at a place of worship, or enjoying a party.
- Responds to background noise of all intensities, allowing the clear, crisp sound you want to hear come through without generating distortion.
- Automatically eliminates or reduces the annoying whistling (feedback) noise without affecting what you want to hear.
- Reduces annoyance and fatigue of background noise while giving clarity and low distortion to speech, resulting in clear speech understanding.
- Improved battery life - no need to replace the batteries as often as other hearing aids.

The Intuir family of products is available in all custom styles.

Why Two Hearing Instruments are Better than One

Patients sometimes ask why their hearing healthcare professional recommends two hearing instruments rather than one. If you have a hearing loss in both ears, you are most likely a candidate for two hearing aids. Similar to the way refractory problems in both eyes are treated with a pair of glasses, it makes sense that bilateral hearing loss should be treated with binaural hearing aids. While a hearing healthcare provider can best determine if you are a candidate for two instruments, the ultimate decision is yours.

Consider these important advantages of a binaural (two ear) fitting:

- A more natural, "stereo sound" and an overall balanced feeling.
- Improved ability to identify the direction of the sound, which is crucial for safety.
- Hearing is less tiring and listening is more pleasant.
- Increased ability to understand speech in normal conditions and noisy situations.
- Less volume needed, which reduces the interference of background noise and the chance of feedback.
- Keeps both ears active, reducing the chance of the unaided ear losing its ability to hear or understand.
- Greater comfort when loud noises occur.
- Smoother tone quality and improved clarity.
