## Are you missing important conversations?

Take the family to the movies, hear a playful whisper from your spouse, have a night on the town with friends. Now you can enjoy better hearing in the company of family and friends without worrying about interfering background noise.

Feel free to walk into most any environment and be confident that your hearing instruments will constantly adjust to your surroundings, providing optimum sound quality.

Digital technology has changed the world of communication. You may benefit from this exciting technology in a very personal way with the Ligerio hearing instrument.

With the power of advanced digital processing, the Ligerio instrument reproduces the sounds around you with optimum fidelity. Your hearing healthcare provider can select appropriate controls, using them in combination with multiple channels and bands to modify the incoming sound to meet your unique hearing needs.

### Features:

- Speech is automatically processed through 2 channels and 2 bands resulting in clear sound.
- Easy adjustments may be made by your hearing healthcare provider without the need of a computer or special software.
- A built-in expansion for quieter performance.

### Options:

- An adjustable or an automatic volume control is available.
- A Telecoil option will eliminate microphone interference while using a telephone.
- The Ligerio is available in all custom styles, Full Shell to Completely-in-the-Canal (CIC).

*The Ligerio family of products is available in all custom styles.*

## Why Two Hearing Instruments are Better Than One

Patients sometimes ask why their hearing healthcare professional recommends two hearing instruments rather than one. If you have a hearing loss in both ears, you are most likely a candidate for two hearing aids. Similar to the way refractory problems in both eyes are treated with a pair of glasses, it makes sense that bilateral hearing loss should be treated with binaural hearing aids. While a hearing healthcare provider can best determine if you are a candidate for two instruments, the ultimate decision is yours.

Consider these important advantages of a binaural (two ear) fitting:

- A more natural, “stereo sound” and an overall balanced feeling.
- Improved ability to identify the direction of the sound, which is crucial for safety.
- Hearing is less tiring and listening is more pleasant.
- Increased ability to understand speech in normal conditions and noisy situations.
- Less volume needed, which reduces the interference of background noise and the chance of feedback.
- Keeps both ears active, reducing the chance of the unaided ear losing its ability to hear or understand
- Greater comfort when loud noises occur.
- Smoother tone quality and improved clarity.
